

Vivek Kumar Pandit

+91 83694 19969 • vivek.pandit1499@gmail.com • LinkedIn • GitHub • Mumbai, India

PROFESSIONAL SUMMARY

B.Tech IT graduate with experience building real-world applications, working in agile teams, and solving problems across the full development lifecycle. Proficient in Java, JS, and data-driven workflows. Eager to apply technical and analytical skills in a business strategy and decision-support role.

EDUCATION

KJ Somaiya College of Engineering *Vidyavihar, Mumbai*
B.Tech in Information Technology — GPA: **8.52/10** *2022 – 2026*

Relevant Coursework: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, AI/ML

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Java, Python, SQL, HTML5, CSS3
Frontend: React.js, Vue.js (Composition API), Next.js 14, Tailwind CSS, Figma
Backend & DBs: Node.js, Express.js, MongoDB, PostgreSQL, Prisma ORM, REST APIs, WebRTC, WebSockets (Socket.io)
Tools & Platforms: Git, GitHub, Docker, Vercel, Postman, Clerk Auth, Arcjet, Inngest, MS Office, Power BI
Concepts: Linux Commands, Agile/Scrum, OOP, Networking Fundamentals, MVC Architecture, REST API Design, Real-Time Systems, System Design

WORK EXPERIENCE

Full-Stack Developer Intern *Mehery Soccom Pvt. Ltd. — Jan 2026 – June 2026*

- Architected a production P2P video-calling platform (Vue.js + Node.js) integrating WebRTC with STUN/TURN server fallback, supporting reliable real-time media streams across 10+ concurrent peers with sub-second connection setup.
- Designed and implemented the WebRTC signaling layer and ICE negotiation service from scratch, enabling seamless call setup and teardown with automatic peer reconnection on network changes.
- Optimised Vue Composition API reactive state for live call sessions, reducing unnecessary re-renders by ~35% and improving video frame-rate consistency under load.

Software Engineer Intern *CommonWealth — Jan – May 2025*

- Contributed to the Government Performance Management System (GPMS), a public-sector platform serving thousands of users, as part of a 6-engineer Agile/Scrum team across multiple sprint cycles.
- Built and shipped 15+ reusable React components with shared design tokens, reducing per-feature UI development time by ~30% and eliminating cross-module style inconsistencies.
- Led Git branching convention adoption (feature/fix/release strategy) for the team, cutting PR review turnaround from 48 hrs to under 12 hrs.

Frontend Developer Intern *MeshCraft — Aug – Sep 2024*

- Produced 10+ WCAG 2.1-compliant Figma prototypes covering full user journeys; accessibility-first approach reduced QA remediation cycles by ~25% at engineering handoff.
- Partnered with frontend engineers to translate specs into production components, compressing design-to-code iteration from 3 rounds to 1 for 80% of delivered features.

PROJECTS

SoMo – Full-Stack Social Media Platform [Live App] [GitHub] *2025 – Ongoing*
React, Node.js, Express, MongoDB, Socket.io, JWT, Cloudinary, Vercel

- Designed and built a MERN social platform end-to-end with 10+ features (posts, comments, follows, bookmarks, profile editing), JWT authentication, and role-based authorization.
- Implemented real-time event delivery for likes and comments via Socket.io, achieving sub-100ms latency at the application layer.
- Engineered a “Silent Follow” feature requiring novel backend data-model changes — users follow without receiving posts — demonstrating ability to convert ambiguous product requirements into schema decisions.

Saveior – AI-Powered Finance Tracker [GitHub] *2025*
Next.js 14, Prisma, PostgreSQL, Google Gemini API, Arcjet, Inngest, Clerk Auth, Vercel

- Built a smart finance app that auto-extracts receipt data via Google Gemini Vision API, eliminating 100% of manual transaction data-entry.
- Integrated Arcjet (bot detection & rate-limiting) and Inngest (event-driven scheduling) for automated monthly email reports via Resend, demonstrating production-quality security and infra patterns.
- Designed an end-to-end data pipeline to automate financial reporting, reducing manual data-entry to zero and enabling monthly analytics delivery via automated email reports.

CERTIFICATIONS

Java Programming: Solving Problems with Software *Duke Univ. (Coursera)*
Visualization for Data Analysis with Power BI *Microsoft. (Coursera)*
Google UX Design Certificate *Google (Coursera)*
Version Control *Meta (Coursera)*
Blockchain Basics *Univ. at Buffalo, SUNY (Coursera)*
MS CIT *Keerti Classes*

KEY ACHIEVEMENTS

- Participant, **Smart India Hackathon 2023** — delivered a working AI traffic management prototype within a 36-hour timeline.
